Brightening or Darkening an Image This process is called "brightening" or "darkening" your image and is done to brighten the color of an image. You can brighten an image by increasing its overall brightness or brightness of its highlights, blacks, and midtones. Brightening an image can help you to bring out the colors in the shadows and highlights. Darkening an image improves detail in the shadows and highlights. You can brighten or darken an image using the dialog box (Windows) or Color Balance (Mac) adjustment panel. To brighten an image, choose Image ▶ Adjustments ▶ Brightness/Contrast and then drag the Brightness slider to the left to brighten the image. To darken an image, choose the same menu, then drag the slider to the right. For more information on using the Brightness/Contrast adjustment panel, see the following sections.

The Birth of Cryptocurrency. The Ron Paul Revolution. (2009-2012) The idea of cryptocurrency, and its ability to compete with fiat currency, is to create a new economic system based on the idea of decentralized governance. This does not replace existing currencies and government, but it does provide an alternative that can reduce the amount of money that is in circulation. This movement was led by one of the original developers of the Internet, Ron Paul. He was among the first to publicly advocate for such a move, and created the Congressional Gold Commission in order to make his ideas a reality. [youtube Originally, the Commission was to attempt to limit US debt by purchasing \$1.6 trillion in government debt and redeeming it with treasury notes. Upon the assassination of Ron Paul, former congressman John Campbell assumed the office of chairman of the Commission. The Commission was in part a reaction to the economic crisis, and its purpose was to reduce the flow of money in a way that was non-political, and beyond the influence of the Federal Reserve. You can see a timeline of the events leading up to the formation of the Gold Commission here. One of the things you will notice is that the two big spikes in the price of Bitcoin come just a few weeks before and after Bitcoin was to be sold for redemption. Bitcoin was popularized around April 2011, when it was announced that the US Treasury was going to sell \$41.8 billion in treasury notes that they had in the banks. When Bitcoin went live, you could see that the price went from 29 cents to \$11.63, with a market capitalization of \$1.1 billion. This is when things really started to accelerate. The July 2011 Series of failed bank bailouts in the US pushed the price of Bitcoin to \$297.70 and a market cap of \$21 billion. This was when a US Congressman named Josiah O'Brien was able to get behind the Bitcoin cause. He worked to get Congress to make the purchase of treasury notes in Bitcoin legal, and then the subsequent sale of the Bitcoin proceeds. You can see how Bitcoin's price was affected by the Failed Bank Bailouts here. Then, the coins were used to upgrade the Bitcoin blockchain, and more people became interested in the currency. The Price of the Bitcoin began to climb, and in September 2011 it was listed a681f4349e

Q: Filling ViewModel with properties using CodeFirst to the database I am working on an application using ASP.NET with Identity and Entity Framework Core. The application will be accessed by mobile devices. I am working on the logic for data storage. I am using ViewModels to store the raw data of the Users of the application. My goal is to fill the ViewModels from the database. Now my question is: Is it possible to set the properties of a ViewModel on the database or is it necessary to always filter the ViewModels? I already thought about adding a new table to the database, containing all the fields of my ViewModel, but I am unsure if that is the best way to do it. This is the ViewModel: public class UserIdentityViewModel { public string Username { get; set; } public string PasswordHash { get; set; } public DateTime? Created { get; set; } public DateTime? Expires { get; set; } public DateTime? AccessToken { get; set; } public string RefreshToken { get; set; } public string TokenType { get; set; } public string AccessTokenType { get; set; } } The ViewModel is filled with the properties Username, PasswordHash, ..., TokenType. I already tried the following: Example 1 - pass all the fields to the database and hide the properties of the ViewModel (this works but it seems like a bad solution to me): User user = context.Users.Include(v => v.Roles).FirstOrDefault(); foreach (var item in user.Properties) { context.Entry(user).Property(item.Key).IsModified = false; } context.Users.Add(user); await context.SaveChangesAsync(); Example 2 - Pass only the properties to be filled in the ViewModel and not the properties to be filled in the database:

The head of the Russian Orthodox Church was sanctioned over the latest unrest in Ukraine, and the U.S. authorities described a number of pro-Russian activists who have been demonstrating for Russian support as "Russian government agents" who are leading up to "active measures." The church, headed by Patriarch Kirill and the highest-ranking official in the Russian Orthodox Church, has come in for criticism from the U.S. government for its close relationship with the Russian government. Facing massive protests in Moscow on Sunday, Patriarch Kirill said he believed the people were "suffering" from "moral diseases" but also claimed that the protesters were supported by the West -- which he called "pawns" -- and warned that the West's treatment of the country would destroy the Ukrainians. The United States imposed new sanctions on some of the officials seen as responsible for the unrest in Ukraine's east. Among those sanctioned were Sergey Aksyonov, leader of the self-declared Donetsk People's Republic; Vladimir Groysman, the speaker of the separatist-controlled parliament; and Aleksei Pushkov, head of the Federal Agency for Civic Education. The State Department said the three were responsible for "attempting to whitewash and embolden support for the Donetsk People's Republic and committing violations of human rights." The head of Russia's Orthodox church was also sanctioned for his "troubling" remarks about the violence in Ukraine. In response to the protests, Patriarch Kirill said in Moscow on Sunday: "We have asked international organizations to do everything possible to quickly stop this bloodshed and to do everything to restore order in Ukraine. If this happens, it would be a sincere disappointment for our brothers and sisters, who are suffering and who have all their rights. "Now all the videos you see of the fighting are being shown, not only on Ukrainian television, but even the international ones are showing these videos, despite the fact that it's our fellow citizens, our brothers, sisters who are protesting," he continued. "If this is a proper morality, what kind of moral diseases are in the people! No, these are diseases, not in people, but in our morality. This is the only one who can make people suffer." The church's policy has been to maintain a balance between Russian President Vladimir Putin and pro-Western Ukrainian President Viktor Yanukovich, while having little to say on the internal affairs of the country.
