Matrix Calculator is a free, Windows application that allows you to perform basic matrix calculations, such as matrix addition, multiplication, inversion, transposition and determinant. You can also perform Gauss algorithm, and any type of matrix calculation using two or three matrices.

Detailed information The Matrix Calculator application is designed to provide you with an everyday tool written for performing matrix calculations. Matrix Calculator enables you to calculate basic matrix operations, apply the Gauss algorithm, transformations, calculate the determinant, the transposed matrix and more. The results can be exported to your computer in HTML

format. To open or run the Matrix Calculator application, follow these steps:

- Click Start, then click All Programs, then click Microsoft Office 2013.
- In the left pane of the Start screen, double-click Microsoft Office 2013, and then click Microsoft Office 2013.
- To open or run the Matrix Calculator application, double-click the Matrix Calculator file, and then click Matrix Calculator.

When the Matrix Calculator application is running, follow these steps to perform basic matrix calculations:

- To perform a simple calculation of two matrices, such as a matrix addition, multiply or invert, click Add, then click the plus sign (+). The first matrix and the second matrix appear on the empty workspace of the Matrix Calculator window. The result of the calculation

appears on the workspace. •To apply the Gauss algorithm, click the Gauss button (Gauss) on the toolbar. The calculation process begins. •To perform matrix transformations, select the first matrix, and then press the “S” key. The transformation type will appear on the top right side of the window. To select the transformation type, click the type. The matrix operations from the first matrix will appear on the workspace. •To perform the determinant operation, select the first matrix, then click the Determinant button (Determinant) on the toolbar. •To perform a matrix transposition operation, select the first matrix, and then press the “T” key. The second matrix appears on the workspace. •To perform a matrix multiplication operation, select the first matrix, then click

the Multiplication button (Multiply) on the toolbar. The second matrix and the third matrix appear on the workspace. • To perform a matrix inversion operation, select the first matrix, then press the “I” key. The second matrix appears on the workspace. •

What's New in the Matrix Calculator?

This software was written by me, Tim Kopp. It is a spin-off from the very popular java language forum Usage: When you launch the program, the dialog window with the title Matrix Calculator (TC) appears (see first screenshot on page 1). The dialog box consists of 4 main frames, each representing a different operation. Main Frames:
