Executable Jar Maker is a lightweight application that helps developers convert Java files and Java Class files to JAR file format in the easiest way possible. Since this is a portable version, it is important to mention that the program doesn't leave any traces in the Windows Registry, and you can copy it on any USB flash drive or other devices, and take it with you whenever you need to carry out the conversion process. This is a Java-based application, so make sure you have Java installed on your computer before running the program. The main window is minimalist and displays only two main options for helping you convert Java files. You can convert either Java files or Java Class files to a format to be run under Java Runtime Environment. After you have selected one of the two options available, you are required to add the Java file to the list. Unfortunately, you cannot drag and drop the files directly into the main window, so you should use the built-in browse button. Moreover, you can make Executable Jar Maker open the directory at the end of the conversion process automatically. Since this application doesn't require much computer knowledge, even rookies can make the most out of each every single built-in feature. During our testing we have noticed that the program manages to accomplish a task pretty quickly and without errors throughout the entire process. It also remains light on the system resources, so it doesn't affect the overall performance of the computer. In conclusion, Executable Jar Maker is a small but powerful software solution that allows users to convert Java and Class files quickly and easily.
