Health > Men s Health. El gran libro de los
ejercicios men's health Findings and
implications {#Sec13}

===== The
development of next-generation
sequencing technologies has led to the
exploration of the molecular mechanisms
underlying the etiology of cancer. In this
study, whole transcriptome sequencing was
performed using an NGS technology, RNA-
seq, to identify novel genes as potential
regulators of melanoma invasiveness.
Further, the *BRCA2* and *ERBB4*
tumor suppressor genes, which have
previously been reported to be regulated
by miRNAs, were identified and
characterized as potential targets of
miR-301a-3p and *miR-375*,
respectively. These two miRNAs were
characterized for their dysregulation in
melanoma cell lines, clinical specimens,
and their association with the *BRCA2*
and *ERBB4* genes. Furthermore, the
functional consequences of
miR-301a-3p and *miR-375* on

melanoma invasiveness were investigated by mimicking their expression pattern in vitro. Both miRNAs reduced the invasiveness of A375 and G361 cell lines
