* This chapter is designed to help you use Photoshop in an efficient manner to create graphics for publication. ## Understanding Photoshop Layers Photoshop layers and raster images can contain text, colors, and images. A raster image (such as one you've created using a photo-editing program) is composed of pixels, and the images created in Photoshop are composed of what's called a raster image. Like most raster formats, a raster image's pixels are organized in a grid of dots, much as a computer monitor would display the dots making up a monitor picture. The Grid (or also called Layers) is a feature unique to Photoshop. A Grid is a grouping of artwork, objects, or text designed to help you manage several image elements all at the same time. You can use them to separate different layers, organize text, and manage objects or layers with transparency to create complex, beautifully designed images. ## Laying Out Layers To create the final image, Photoshop creates one layer at a time in a stack that's called a layer stack. Each layer is set up as an individual Photoshop file, which is called a _layer file,_ so you can organize and move each layer as needed. When you create the final image, you add new layers to organize the information you want to include in the final print or e-mail file. Layers can be one of two types: * **Normal layers:** A normal layer is a file containing the particular type of graphic information you want to include in your image. A normal layer is the level at which you add objects that are in your image. * **Smart object layers:** A smart object layer is similar to a normal layer, but instead of containing information about an object, it contains a link to another Photoshop file where you can insert that object. A smart object is the information you want to include in your image, such as a person, logo, or image that contains some of your own design elements. In the following sections, you find out how to create normal and smart object layers.

What is Photoshop? It is the most common and advanced raster graphics editor among graphic designers and photographers. It is a powerful program for creating and editing images and layouts. It was developed by Adobe Systems and is the most widely-used application for digital photography, graphic design, and image processing. Photoshop contains a collection of tools to modify, combine, and retouch images. It is the most significant program that can be used to create publications, advertisement, posters, etc. There are many graphic elements in which Photoshop is the most famous tool. Photoshop has a wide range of features, including drawing tools, filters, layer functionality, image effects, brushes, and many others. It is not the only graphics editor. There are many other options available online. The best thing is that you can start editing images with these advanced programs, while it is difficult to get started with Photoshop. On the other hand, Photoshop is quite difficult to learn, as users have to memorize many commands, work with a lot of settings and settings. Therefore, it is not a best tool for newcomers, especially for new users who are not familiar with digital images. Also, Photoshop is not accessible and it costs too much. There are some alternatives to Photoshop, some of them are free. Many graphic designers use some of them, while others do not use them. Some of them have a simple and small user interface, while others have a complicated and advanced interface. Photoshop elements Photoshop Elements is a free version of Photoshop. It offers a basic set of tools for creating, editing, and retouching images. It was released on March 24, 2002. The advantage of Photoshop Elements is that it has a simple user interface, it is free of charge, and it has more features than Photoshop. Adobe Photoshop Elements has a simple and easy-to-use interface, which is completely separate from the professional version. It has more than 200 actions that can be used to edit images and create new high-quality images. The basic program has a new and simple interface. It has three tabs: a workspace, the options, and the project manager. The workspace displays an image, it allows users to make changes and edit photos. The options are used to set different settings, while the project manager is used to manage projects. The image editor is basic and there are no advanced tools or settings. Adobe Photoshop Elements contains a large number of actions for image editing and creating. 05a79cecff

with the traditional route. It is therefore understandable why many migrants also go through the regular channel. According to the Zamnijag Kuka (or Kuke, those who choose to be paid in chicken – kuka means chicken in Albanian), it costs about 4,000 Lek (about US$ 90 as of July 2016) to be smuggled to the EU. This is lower than the 'regular' route, which cost around 7,000 Lek (US$ 160). Elderly refugees tell stories of people ending up dead on the border, many are missing and a small number of the migrants who travel through the border are successful in reaching the EU. One example was a young man who was smuggled from Serbia to Sweden using a rickety raft. He was able to escape but was arrested in Sweden; afterwards, he decided not to return to Serbia. The elderly refugees who returned to the villages of Fier and Himarë tell stories of people ending up dead on the border, many are missing and a small number of the migrants who travel through the border are successful in reaching the EU. The migration flows and subsequent return flows show that the border between Albania and Italy is a crossing point for active and passive migration, which is far from the traditional route. According to UNHCR (2017), more than 3,000 people have come through the border since 2013. Among them, 2,214 were minors and 684 were women. A large number of return flows have also taken place. According to UNHCR (2017), 5,958 Albanians returned home in the past five years. In 2017, 2,941 people from Albania returned to the country. Return rates were higher than the numbers of new ones going to Albania. The rate of return to the country was 99 per 100,000 people. It is the highest return rate in the last five years. The majority of the returnees were men. The returns between January and May were equal to the returns for the same period in the same period last year. The number of returnees decreased in June, July and August. Social and legal protection Despite the fact that a significant portion of the population in Albania lives below the poverty line, the country provides migrants and refugees with low-income social and legal protection. For this reason, Albanian institutions of the ECHO (European Centre for Migration and Refugees) and the UNHCR consider Albania to be a "deprivation country". They assert that the
