AutoCAD is a commercial computer-aided design (CAD) and drafting software application. Developed and marketed by Autodesk, AutoCAD was first released in December 1982 as a desktop app running on microcomputers with internal graphics controllers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. AutoCAD is also available as mobile and web apps. Keyboard shortcuts are shown in the Control Panel. The "Win" key on the keyboard is commonly used to activate or to access the AutoCAD menu. The Autodesk Revit family of software products is a CAD package. Competitors The two leading competitors of AutoCAD in the time of its release, March 1989, were MicroStation and Micrografx CAD. The former was a DOS-based, closed source, object-based, Windows-based, desktop-centric package that lacked some of the features of Autodesk CAD. The

latter was an early industry leader in the presentation of 3D CAD and was one of the first 2D CAD packages to achieve critical acclaim. Micrografx CAD was based on Autodesk's original sketchbook 2D software and included over 200 plug-ins for Microsoft Windows 3.x. Another competitor, Microcare, was also introduced around the same time. With the rise of Internet-based CAD, AutoCAD's Competitors began to fade into obscurity. Among those that continue to be sold are Microstation and Micrografx CAD. Originally a major competitor, Micrografx CAD has since been purchased by Corel and has since been rebranded as CorelDRAW. Is there any open source map generation algorithm for 0-1 with the maps like blue line for this image? A: The algorithm behind the blue line is called the Bottom-Up Insertion (BUi). The construction is implemented in the mapping library I wrote, MapBuilder. It is a generic algorithm, and can generate maps with open/closed/connected/nested/fractal properties, etc. You can play with the examples in the repository. A: I recommend you to read my answer to this question. Short summary: while loop is used when you know the end of loop before the start of loop. for loop is used when you know the end of loop after the start of loop. And the difference between the two are already clear. A: for loop is a special case of while loop, so it is usually better to use for loop. while loop doSomething(); if (someCondition) break; for loop doSomething(); For loop always have start index and end index (index will start from 0 and ending at end index - 1), while while loop have start condition and end condition (if start condition is true then continue loop, if end condition is true then end loop). while loop is used for control flow.
