It is necessary to use a plurality of screws to assemble a rotor of the motor of a three-phase full-wave brushless motor. For example, seven screws are needed. However, to use a screw, a screw hole in a rotor is required and the rotor is driven by threadably engaging a screw into the screw hole. Therefore, the number of required screws is increased. Also, there is a possibility of a screw becoming loosened or a half-bared screw causing damage to the rotor. In order to solve these problems, a motor assembling method is disclosed in Patent Document 1. The motor assembling method includes inserting a plurality of securing portions formed on a base into holes in a securing member, clamping the securing member to the base by a plurality of holding jigs including a bottomed hole, and pressing the holding jigs to the base. With this method, the securing portions penetrate through the holes in the base so that the securing members are secured to the base and fixed in place. In addition, the securing members and the base are fixed in position by the holding jigs, so that a large force is not applied to the base. The securing member includes a pair of first and second securing members including a securing end portion. Each of the securing ends has an inner diameter that is smaller than an outer diameter of the base. The holding jigs include a pair of first and second holding members for each of the first and second securing members. Each of the first and second holding members has a pair of first and second clamping portions that are formed to contact and clamp the base. In Patent Document 1, even if the securing member, including the securing ends with small inner diameters, is secured to the base, the securing member is held in position by the holding jigs without being accidentally loosened. As a result, the base can be easily secured in position, and the motor assembling work is not affected. Rather, the approach is to draw attention to the curve of the contribution function, which then can be used to distinguish the various components. In the case of two-component systems, 6d1f23a050
